ACCESS REMOTE APPLICATION FOR WEBSERVER SOLUTIONS

Our new WS4 Remote Application is now available for users on doors controlled by our WS4 webserver access controller.

This multilingual app enables the user to have door access using his smartphone or smart watch like a remote control without the need to open the webserver browser to activate. It can also refresh the different readers of WS4 systems when they have been modified.

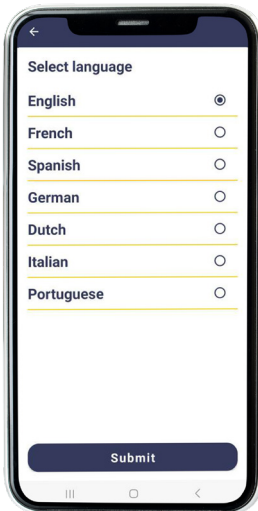

It's ideal for installations like private houses, commercial premises, temporary visits, etc.

>> Door opening modes depending on the app interface used

Android / iOS app	Smart Watch
	
<p>Touch mode:</p> <ul style="list-style-type: none"> - Touch to Open Doors - Touch to Keep Open - Touch to Close 	<p>Touch mode:</p> <ul style="list-style-type: none"> - Touch the Smart Watch to Open, Keep Open or Close Doors

Language

Multilingual

The apps are available in different languages: English, French, Spanish, German, Dutch, Italian and Portuguese.

Door mode

Door open

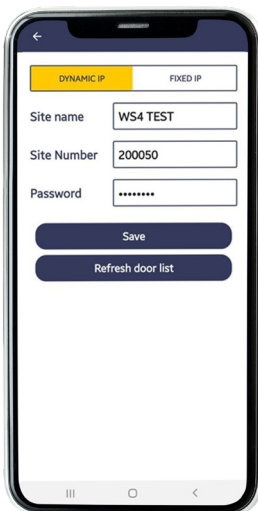

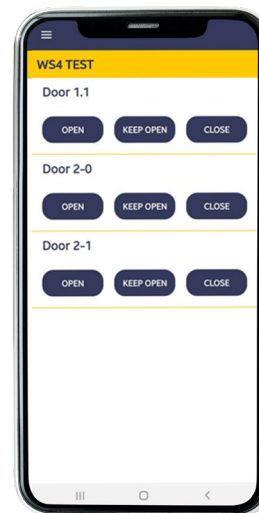

Open the door for the period defined at the WS4 controller.

Keep open

You can select the option "Keep Open" to keep the door unlocked until next door command.

Closed door

If you select the "Close" option, the door will remain closed even if the option "Keep Open" has been selected beforehand.

My WS4

Add, modify or remove sites.

Update the doors list.
